FIG. 5 is a perspective view of the elongated member 24 in a retracted position. The elongated member 24 includes a proximal end 40, a distal end 44, and a central portion 42. The proximal end 40 is connected to a handle 46. The distal end 44 is connected to a tip 48. The central portion 42 is connected to a shaft 50. The elongated member 24 is shown in a retracted position, where the proximal end 40 is closer to the handle 46 than the distal end 44.

FIG. 25A

FIG. 27A is a perspective view of a first embodiment of a device 314. The device 314 includes a main body 324 and a handle 346. The main body 324 is elongated and has a central portion 402. The handle 346 is attached to the main body 324 at one end. The device 314 is shown in a perspective view, with dashed lines indicating the internal structure of the main body 324. The handle 346 is shown in a perspective view, with dashed lines indicating the internal structure of the handle 346. The device 314 is shown in a perspective view, with dashed lines indicating the internal structure of the device 314.
